

The first two columns of the table show the number of cases and the number of deaths. The third column shows the case-fatality ratio, which is the number of deaths divided by the number of cases. The fourth column shows the number of cases per 100,000 population. The fifth column shows the number of deaths per 100,000 population. The sixth column shows the number of cases per 100,000 population, adjusted for age and sex. The seventh column shows the number of deaths per 100,000 population, adjusted for age and sex. The eighth column shows the number of cases per 100,000 population, adjusted for age and sex, and the ninth column shows the number of deaths per 100,000 population, adjusted for age and sex.
